Abstract: The article showed the integration of artificial neural network and expert system in artificial intelligence, which was introduced in the analysis of bending parts' defects. The key techniques of system include the selection of knowledge acquisition, knowledge representation, knowledge database structure and reasoning mechanism of this system and so on. According to practical machining processes the information of bending parts' defects was selected synthetically and classified carefully and dealt with by artificial neural network (BP with momentum). The article introduced the BDANES (vl. 0) software in brief, which was established according to the mechanism of the system.
